Door Swing Chart

Walk doors are often a problem for builders and erectors. Damage, lost parts, quality of components, difficult hardware installation, and door installation time, among others, are issues faced every day with traditional knock down door systems.

The **ADVANTAGE preassembled door system** solves these common problems. The preassembled door system is **completely factory assembled**, including all hardware and the subframe system (framed opening). As a result of this, the preassembled door system can typically be installed in less than thirty minutes. No additional cutting, welding, or painting is necessary. In fact, we even go so far as to include the glass in our lite kits (see Lite Kit options).

Dominion also strongly believes that builders need and want choices. There are options for sizes, colors, door gages, and door skin types in addition to the many hardware options. **The choices are virtually unlimited.**
